Subject: Who is a person in Region 3 familiar with the field sampling techniques used in Dimock?

Hi Angela,

ORD has set up a group to discuss sampling and field activities at oil and gas sites, with the goal of trying to get some uniformity to at least the first look at a site when a complaint comes in. Right now, no one from Region 3 is on the group. I would like someone who can talk with some detail about how samples were collected and what analytical methods are commonly used in Region 3, and I would guess the Dimock folks would be a good place to start. Could you tell me who that would be?

Also, on our Region 6 hydraulic fracturing news updates, our librarian is leaving at the end of next week, and so those will stop.

Mike
